

LAWAL Hussein Taiwo

Career Profile

I am a Python Django Developer with 3 years of professional experience architecting, developing, and deploying robust, scalable, and secure web applications across SaaS, fintech, and data-driven platforms. I have an expert command of the Django framework, including the Model-View-Template (MVT) architecture, advanced ORM optimization, and relational database design using PostgreSQL, MySQL, and SQLite. My technical expertise extends to RESTful API development, asynchronous task processing, and frontend integration, enabling me to build high-performance applications with seamless user experiences. I have implemented AI-powered features such as chatbots and intelligent automation, adding value to dynamic web platforms. I thrive in Agile and DevOps environments, utilizing CI/CD pipelines, Git, and test-driven development (TDD) to deliver reliable, maintainable code. With a strong foundation in software architecture, security best practices, and data protection compliance, I am committed to developing innovative solutions that solve real-world problems at scale.

Key Strengths Include:

- Developing custom authentication systems, including email-based login, password reset workflows, and role-based access control (RBAC).
- Strong problem-solving skills, with a focus on debugging, performance optimization, and delivering efficient, scalable solutions under tight deadlines.
- Designing and integrating RESTful APIs using Django REST Framework (DRF) and consuming third-party APIs for payments, messaging, analytics, and external data sources.
- Designing and optimizing relational databases with PostgreSQL, MySQL, and SQLite, ensuring data integrity, performance, and scalability.
- Applying security best practices, query optimization techniques, and maintaining clean, modular code architecture.
- Automating tasks with Python, including data scraping, batch processing, and workflow optimization.
- Integrating AI-powered features into applications, including chatbot development, natural language processing (NLP), and intelligent automation.
- Hosting and managing static/media files with Cloudinary for fast, optimized delivery in Django applications.
- Implementing responsive, user-friendly interfaces with Bootstrap and Tailwind CSS for seamless frontend integration.
- Managing asynchronous background tasks using Celery and Redis for notifications, scheduled jobs, and email delivery.
- Utilizing Git for version control, Docker for containerization, and deploying applications to Heroku and AWS environments.
- Practicing test-driven development (TDD), maintaining high code quality standards, and working within Agile and DevOps workflows using tools like CI/CD pipelines.

Education

August 2022 - February 2023

NIIT , Lagos – *Junior Python Developer*

I studied python programming for 6 months. Where i was able to learn the basic fundamentals in python and build little projects to boost my knowledge in python.

April 2023 - present

Aptech, Lagos ,Maryland– *Advance Diploma in Software Engineering*

I studied Software Engineering at Aptech Private University, focusing on Python development, Java and its functionalities, as well as web technologies like HTML, CSS, JavaScript, Bootstrap, jQuery, and AngularJS. I developed expertise in creating well-structured projects and earned my Advanced Diploma in Software Engineering (ADSE).

SKILLS

Languages/Tools/Frameworks/Concepts

Programming Languages: Python, JavaScript, , Java,react native

Web Technologies: HTML, CSS, Bootstrap, Tailwind

Databases: SQLite, PostgreSQL, MySQL

Frameworks: Django, React.js,Flask,Fast-API

Version Control: Git, GitHub

Experience

February 2024- July 2024

Power Learn project , Kenya – *Student Software Engineer* *Apprentice*

- Expanding my knowledge and understanding on django fundamentals and also building projects to back my knowledge up.
- Understanding the core basic knowledge on django framework in python programming

May 2024 - Present

Bincom Dev Center, Lagos– *Python Developer* *Apprentice*

- Improving my skill in Django development
- Also learning and working on machine learning and data science with the use of pandas , matplotlib , numpy , Scikit-Learn

April 2024 -May 2024

- Worked on building Gui applications like Temperature Converter and
 - Contact Management System also Gui
-

Projects

1. **E-commerce Web Application** :Developed a full-featured e-commerce web application from the ground up, enabling users to browse products, manage carts, and complete purchases seamlessly. Implemented secure user authentication with email-based login, password reset, and role-based access control (admin/customers). Integrated product management, real-time cart updates, and order tracking. Designed and optimized the database schema for scalability and performance using PostgreSQL. Integrated payment gateway APIs for secure transactions and used Celery with Redis for background order notifications and email receipts. Deployed and managed media assets via Cloudinary for optimized product image delivery. Focused on responsive design with Bootstrap for an intuitive user experience across devices. Ensured code quality with Git version control and deployed the application to Render with environment-specific settings.

2. **Logistics Web app** : Developed a logistics management website for Altivox using Django to streamline order processing, shipment tracking, and customer communication. The platform featured secure user authentication, real-time delivery status updates, and an intuitive admin dashboard for managing shipments, drivers, routes, and customer data. I integrated third-party APIs for real-time location tracking and implemented automated email notifications to keep customers informed throughout the delivery process. The system improved operational efficiency by centralizing logistics workflows and ensuring timely updates. The application was deployed on Render with a responsive design for seamless access across devices.

3. **Product Management System**: I developed a comprehensive Product Management System for employees to manage customer transactions, including recording purchases and payments in a database, sending automated email notifications for order status and payment confirmations, and providing a searchable and filterable product interface for easy access. I used django for the backend and Html,css ,javascript for the front-end and sqlite for the database

4.**Email Automation System**: Developed an efficient email automation system that enables users to send bulk emails with attachments in under a minute. The system supports multiple recipients, ensures fast and secure delivery, and enhances productivity with a user-friendly input process. It automates the email-sending workflow, reducing manual effort and improving communication efficiency. With the aid of SMTP module, I was able to send mails to different users.

5.**Social Media Platform**: I developed a dynamic social media platform where users can create accounts, manage profiles, and securely log in or register. The platform enables users to create and share posts, as well as engage with content through features like liking posts. Additional functionalities include user authentication, profile

customization, and a responsive interface for seamless user experience. The platform also supports real-time updates, allowing users to see post interactions in real time. I used django for the backend and Html,css,Tailwind, javascript for the backend and sqlite for the database

6. Trip Booking Management System: I launched **Expense Voyage**, a travel organization website developed using Python (Django), HTML, CSS, JavaScript, Bootstrap, and Postgres for the database featuring user account management, booked trip displays, destination pricing, upcoming travel tracking with notifications, user reviews, trip management, direct contact support, search functionality for upcoming trips, and an admin page for trip approval with email notifications including flight tickets.
